1 INTRODUCTION

The 2019 Rally Colorado Performance Rally will be held July 26th and 27th. 2019. Rally Headquarters is at the Blue Mountain Inn & Suites, 37 Park St, Rangely, CO 81648.

This rally, along with other rallies in America, utilizes a similar safety plan that encompasses competitors, spectators, volunteers, and civilians. The major emphasis of this plan is to provide the maximum protection for all of those involved or possibly affected by the rally. A safely run rally is first evidenced by a well-written and properly executed safety plan. Dedication of all volunteers to adhere to the plan is also necessary.

This event will be run in conjunction with a FEMA ICS (Incident Command System) with an IAP (Incident Action Plan) for the event.

ICS definition from <https://training.fema.gov/emiweb/is/icsresource/assets/glossary%20of%20related%20terms.pdf>

ICS is a standardized approach to the command, control, and coordination of on-scene incident management, providing a common hierarchy within which personnel from multiple organizations can be effective. ICS is the combination of procedures, personnel, facilities, equipment, and communications operating within a common organizational structure, designed to aid in the management of on-scene resources during incidents. It is used for all kinds of incidents and is applicable to small, as well as large and complex, incidents, including planned events.

This safety plan includes a detailed description of and plan for the following:

- Emergency contact names and numbers for rally officials and local emergency services.
- Event communications, method of communication, type of directed net, location of all persons in the communication network
- A description of how local residents were advised of the event and when.
- A description, a schedule and a list of all persons authorized to travel on a stage road once the control crew is in place.
- Event specific course opening and closing procedures.
- Event specific emergency response procedures and a chart defining hierarchy in the event of an emergency.
- Event specific spectator safety procedures.
- Event specific fire safety procedures.

This Safety Plan is designed to help prevent emergencies and to guide appropriate course of action in the event of an incident. This plan resulted from a collaborative effort among rally and emergency officials. It is distributed among the organizing committee, key event volunteers and agencies within the area to enhance awareness.

As our sport becomes more popular in the U.S., we must all remain mindful of our safety and the safety of others by warning and providing direction to those who are not seasoned rally aficionados.

2 CONTACTS

2.1 ORGANIZING COMMITTEE

Chairman	Alan Gardiner	720-514-1427 cell Alan_Gardiner@Comcast.com
Clerk of the Course	Rob Bohn	317-877-0303 cell RobBohn@NaturalSol.com
Chief of Communications	Robert Wareham	303-552-7892 cell robert.wareham@state.co.us
Chief of Emergency Services	Brice Glasscock	911 or 970-878-9620 brice@rbc.us
Chief of Spectator Safety	Pat/Denise McMahon	562-547-1133 denise@ohprg.com
Chief Registrar	Karen Steely	970-339-9105 SteelyKS@yahoo.com
Chief Scrutineer	Bob Campbell	719-339-3812 bobc80829@yahoo.com
Chief of Volunteers	Tracey Manspeaker	
Chief of Controls	Preston Osborn	preston.osborn@yahoo.com
Media Coordinator	Rupert Berrington	303-699-5118
Social Media Coordinator	David Brown	4racerdave@gmail.com
Chief of Service	Trina Pace	970-339-9105 Trina_Pace@comcast.com
Chief of Zero Cars	Keith Lightfoot	970-819-0402 kslightfoot@comcast.net
Chief of Sweep	Frank Eichenlaub Mile High Jeep Club	winchpoint@comcast.net
ARA Steward	TBD	

2.2 EMERGENCY CONTACTS

Law Enforcement	Rio Blanco County Sheriff	Anthony Mazzola, Brice Glasscock, Ty Gates	911 (970-878-9620)
	Rangely Police Department		911 (970-675-8466)
Fire Department	Rangely F.D.		911 (970-878-9620)
	Rio Blanco F.D.		911 (970-878-9620)
Emergency	Rangely EMS		911 (970-878-9620)
	Rangely District Hospital	225 Eagle Crest Dr	970-675-5011

		Rangely, CO	
	St. Mary's Medical Center	2635 N 7 th St Grand Junction, CO	970-298-2273
Rally Headquarters	Blue Mountain Inn		970-675-8888

2.3 CHAIN OF COMMAND

2.3.1 Normal Operations

- CLERK OF THE COURSE
- CHAIRMAN
- CHIEF OF CONTROLS
- ARS STEWARD

2.3.2 EMERGENCY Operations

- CHIEF OF EMERGENCY SERVICES
- CLERK OF THE COURSE
- CHAIRMAN
- CHIEF OF CONTROLS
- ARA STEWARD

Any stage with an emergency situation immediately comes under the control of the Chief of Emergency Services until the situation is resolved.

Whenever a decision must be made regarding the course, controls, or emergency medical teams, these people have the authority to make them. No others will be permitted and all should be cleared through NET CONTROL as a matter of courtesy so we have a log of what goes on during the event. Any stage with an emergency situation immediately comes under the Emergency Operations Chain of Command until the situation is resolved.

2.4 EMERGENCY CONTACTING

A list of emergency telephone numbers will be at NET CONTROL, along with the Chief of Emergency Services and Chairperson. Additionally, numbers will be listed in the route book to be used as a last resort by competitors unable to reach NET CONTROL.

If there is a medical emergency within a stage, the normal plan is for the start medical person or team to be sent down the stage to determine what is needed and to stabilize the situation. This information will be relayed to Net Control and the Chief of Emergency Services. Net Control will be contacting the appropriate emergency resources to respond to the scene. These resources will access the scene by traveling from the start area to the scene, and will be transporting out through the finish. These Procedures may vary slightly based on time frames, and the exact scene location.

3 PRE-EVENT

3.1 LAW ENFORCEMENT

The Colorado State Police Regional Dispatch in Craig Colorado, and the Departments as listed will be contacted and provided with the following; copies of the schedule, a map showing the roads used for stages, transits, a copy of the safety plan and a telephone number for the NET CONTROL during the event. Law Enforcement, BLM, EMS, Fire, and Regional Dispatch will be able to communicate directly with each other via 800 MHz radio system on a special event channel for this event.

State Police Post: Troop 4B Craig
County Sheriff: Rangely Substation Rio Blanco County's sheriff office
Town Police: 209 E. Main St. Rangely, CO 81648

3.2 FIRE DEPARTMENTS

All local fire departments in the rally area will be contacted. First to inform them of the rally and provide the necessary information in case they are called to assist. Second is to evaluate the resources available as First Responders / Rescue / Extrication to accident scenes.

Rangely F. D. 115 Nichols St, Rangely, CO 81648
Rio Blanco F.D. 236 7th St, Meeker, CO 81641

3.3 HOSPITALS AND EMS

The County Medical Control Boards will be contacted by the Chief of Emergency Services to inform them of rally and the schedule of times when the event is in their area.

Hospitals: <http://www.rangelyhospital.com/>
<http://pioneershospital.org/>
EMS: <http://hourshq.com/s/ems/rangely/colorado/usa>

As of 6/26, Classic of Vernal will provide the airmedical/helicopter that will be physically positioned near the spectator location of each day.

3.4 OTHER ORGANZATIONS

3.4.1 Board Land Management

BLM officers will be contacted to secure any necessary permits.

3.4.2 Road Commissions

The County Road Commissions will be contacted in Rio Blanco to secure permissions as required in the county listed above where roads fall under their control.

3.5 NOTIFICATIONS

3.5.1 Local Residents

Attempts will be made to contact persons (if any) living and owning any buildings along the route of the special stages while the course is being established. In addition; prior to the rally (approximately 2

weeks), a notice will be placed in each mailbox, doorway, or wall of these buildings giving the reason, dates, and who to contact for more information.

3.5.2 Stage Caution Signs

Cautionary/informational signs will be placed at the start, finish, and major intersections within the special stages.

4 COMMUNICATIONS INFORMATION

4.1 COMMUNICATIONS OVERVIEW

The organizers, volunteers, and emergency medical teams are tied by a radio network. The purpose of a radio network is threefold:

- Emergency communications
- Volunteer safety
- Logistical support

The network is directed by emergency communications with all other traffic secondary.

4.1.1 Method of Communication

Radio operators will provide communications utilizing **800 MHZ Digital Radios** over the entire rally route as part of a **Directed Net**. Specific channels will be identified before the rally. The network is directed by emergency communications with all other traffic being secondary. If this system does down, a CALL/TAC channels are already allocated, and a recently installed Amateur Radio Repeater is available as a further fallback.

4.1.2 Frequencies and Repeaters

We are utilizing 800MHZ Radios and do not need repeater frequencies

4.1.3 Locations of Radio Operators

A radio operator must be at the following points of the course and at least every 10 miles:

- STAGE START
- STAGE FINISH
- SPECTATOR AREA(S)

RADIO OPERATORS MUST BE PRESENT AT THESE LOCATIONS OR THE STAGE WILL NOT BE USED IN COMPETITION.

4.2 ADDITIONAL VOLUNTEERS AND OFFICIALS WITH RADIO COMMUNICATIONS

The following persons either working the event or officials of the event should have a radio or radio operator (in order of priority):

- CHIEF OF EMERGENCY SERVICES
- CLERK OF THE COURSE
- CHIEF OF CONTROLS
- CHAIRMAN
- MEDICAL TEAMS
- COURSE OPENING
- ARA EVENT STEWARD
- ARA SAFETY STEWARD (if applicable)
- ARA OPERATIONS STEWARD (if applicable)
- SWEEP
- SCORING

5 RADIO OPERATIONS

5.1 GENERAL PROCEDURES

- This is a directed net - all calls will be made through NET CONTROL; if you wish to talk to another station on the NET, you can call them only after calling NET CONTROL and getting permission
- To call NET CONTROL use your tactical call sign such as "Three Start" (Start of Stage 3)
- NET CONTROL will respond by repeating your tactical call sign & asking you to go ahead. If the NET is busy, this response may not be immediate
- Finishing a transmission with a call sign is not needed due to the use of 800 Mhz Digital Radios
- Leave a small amount of time between the end of the NET CONTROL transmission and your call to NET to provide a window for EMERGENCY TRAFFIC!
- All radio operators must listen to the NET - this is your duty.

5.2 EMERGENCY COMMUNICATIONS PROCEDURES

Interrupt the NET by saying "BREAK, BREAK." NET CONTROL will acknowledge, then tell them the problem with the following information as obtained:

- The mileage from the stage start and the instruction number – if known
- Car number – if known
- if there are known or suspected injuries, entrapment, fire: **YES or NO ONLY**
- Number of cars that have started or finished the stage or have gone past your location (depending on your location)

Only NET CONTROL (using information from the Chief of Emergency Services) can decide to send a medical team into a stage.

SAY NOTHING TO ANYONE EXCEPT RALLY OFFICIALS REGARDING AN INCIDENT. REFER ALL QUESTIONS FROM PRESS AND CIVILIANS TO THE CHAIRPERSON.

5.3 GENERAL DUTIES

5.3.1 Log sheets

Radio operators are asked to record on the log sheet provided:

- Each car's number as it passes you
 - The competitor number is on the side of the car and is also on a window
 - if not visible, the entry list may help determine this number
- The total number of cars that pass your location

This is a very important duty of a radio operator, because it is how we track where cars are throughout the event. Net Control may ask AT ANY TIME what is on the log sheet - BE PREPARED!

5.3.2 Keep Net Control Informed

Inform Net Control of the following as they occur:

- When you arrive at your pickup point (if applicable)
- Depart from your pickup point (if applicable)
- When you are in place & ready at your assigned position
- When the medical crew has arrived (if at a Start Control or Spectator Point))
- When the first competitor car arrives at a Start Control
- Start time of the first competitor car if at a Start Control
- The total count of cars that have started or finished your stage (if at a Start or Finish Control)
- The car numbers of the **last** three competitor vehicles

- When sweep vehicles arrive at a Start or Finish Control
- When sweep vehicles start a stage (if at a Start Control)
- When sweep vehicles finish the stage (if at a Finish Control)
- When the stage is ready to be shut down

5.3.3 Net Control Must Clear The Following:

- Departure of Car 0 fro a Start Control
- Departure of the first competitor vehicle from a Start
- Departure of a medical team to an incident
- Departure of Sweep vehicles
- Shut down of a stage

6 SAFETY AND CONTROL

6.1 COMPETITOR SAFETY

Competitor Safety is centered on the competition sections of the event. The focus is on accurate identification of incidents and speedy “first response”.

The primary means of locating an incident is the observation of same by the next following competitor or the SAFETY SWEEP vehicle. Competitors must display an “OK” sign to following vehicles whenever stopped in a race section without the need of emergency assistance. When emergency assistance is needed competitors display a “red cross” sign requiring the following vehicles to stop and assist. Competitors must also stop and assess an incident without any signage. The competitors then follow a specific protocol for establishing control of an incident and notifying the radio network.

Incident notification will usually come through the radio operator from the Finish Control of the stage or a mid-point radio where deployed. All midpoint radio locations are marked in the route book so competitors know where to stop to notify them of an emergency. Mid-point radio is also noted by a blue radio sign.

Competition cars are tracked using sequence numbers issued at each control and entered into the control log. If a sequence number is missing, the control will ask the arriving competitors if they saw any disabled competitors or if they passed anyone. If the missing sequence number is not immediately found, Net Control will be advised.

Competitors stranded due to a disabled vehicle will be contacted by the sweep team, which will offer assistance as appropriate.

6.2 EMERGENCY MEDICAL SERVICES

A medical team with equipment is stationed at the Start Control, official spectator areas, and designated midpoints in a separate, dedicated vehicle with a driver and a radio operator. They have contact with the event through the radio operator.

During the event in addition to the required med teams located at the start of each stage and spectator areas, we will have at least one basic level ambulance on a stand-by status to respond to trauma/medical emergencies.

Since our stages all take place in a rather confined area, the ambulance may be centrally located in the rally areas, so it may respond to any situation for which they are needed as expeditiously as possible. The ambulance is contacted using the 911 dispatcher, MARCS radios, cell phones or directly by a radio operator stationed near them.

Whenever possible we will have as many volunteer ambulances available as possible. These ambulances will be strategically placed by the Chief of Emergency Service to make best use of them and to keep them available for calls in their jurisdiction.

The ambulances will be provided with maps showing the stages and transit routes to help them navigate to the location of an incident. The Chief of Emergency Services will meet with each ambulance crew when they arrive for duty, to go over their assignment and to help familiarize them with the rally.

6.3 MEDIA SAFETY

There will be ARA approved media in various spots along the competition route. These media people will have highly visible and easily recognizable color coded credentials and vests (if supplied by ARA). The ARA has two levels of media accreditation, unrestricted and restricted to elevate the level of safety for media based on experience.

- **Unrestricted** – will have a **Blue** Media Vest and is designed for seasoned motorsports media professionals with extensive rally experience. Members of the press with unrestricted access are permitted to work from any location that adheres to the ARA media policy on safety.
- **Restricted** – will have a **Red** Media Vest and is designed for media professionals with limited rally or motorsports media experience. Restricted media is not to be outside of the **yellow** marked safety area for spectators.

For media not at spectator areas, the OO car will assess the position of the media to ensure they are in a safer areas. Should they determine that any media is in an unsafe location, they will immediately advise the media member to relocate to a safe area. For media at spectator areas, marshals will advise media on safe placement.

Media, regardless of their credentials, must never be located in areas identified as “unsafe”. The ARA, all Rally Officials and Marshalls have final word on where media personnel stand. If asked to move, they are to move without discussion. Any media person violating general safety guidelines can be asked to leave the competition area.

6.4 SPECTATOR SAFETY

Official spectator viewing of the rally is limited to Designated Spectator Areas. These viewing areas are under the direction of the Chief of Spectator Safety and the Chief of Emergency Services.

Designated Spectator Areas will have:

- Pre-determined “safer” viewing areas, well-marked with yellow banner tape indicating safer areas to spectate from and will indicate prohibited areas with red banner tape.
- A radio operator and a medical team ☒ Marshals sufficient for crowd control and capable of instructing spectators
- Bull horns or other warning devices for the marshals’ use
- Fire extinguisher
- Controlled parking to ensure access for emergency vehicles

The event will publish spectator information that includes:

- Travel instructions to/from and operating times for the Spectator Areas
- Maps identifying the “safer” and “unsafe” areas for viewing
- Detailed list of “good spectator” do’s and don’ts

Should spectator area marshals determine they lack adequate spectator control they will immediately advise Net Control so the stage can be stopped. At the request of the organizers, the County Sheriff will furnish extra deputies, in uniform, to be at the spectator areas during the running of the event. They will be in radio contact with their dispatcher, as well as the rally net radio, to expedite their movement to the site of any difficulty. Access points to the competition sections will have some form of warning notification regarding the rally. This may be tape with signage, or a marshal.

Occasionally there may be small unplanned groups of people congregating along the stages outside of designated spectator areas. At these spots, course opening vehicles will ensure that the “safe” and “unsafe” areas are properly communicated to these groups.

During active competition the marshals manage spectator activity in the proximity of racing. If there are any spectators found in an area deemed to be unsafe by the marshals or the officials, the stage may be shut down and all rally traffic stopped immediately prior to that area by the marshals’ use of a Red Cross.

These viewing areas fall under the direction of the Event Safety Steward, Spectator Safety Coordinator and the Chief of Emergency Services along with the Chief of Controls supplying marshals. All unsafe locations at the viewing areas will be marked with banner tape. Spectators will not be allowed into these areas, and a marshal should not be in this position during competition - even if it is to keep the spectators out. The vehicles will be parked on the sides of the road to allow entrance and exit of emergency vehicles if required.

6.5 VOLUNTEER SAFETY

Stage volunteers are to be trained in stage operations, including personal safety while operating start or finish controls, controlling stage access points and marshaling spectator points.

All volunteers, control, marshals, and radio operators will meet at a rendezvous point for organization by the Stage Captain. From this point they will be escorted to their posts in the stage. A comprehensive layout route book will detail the plans for setting the stages. Stage volunteer radio communication with Net Control begins at the rendezvous point.

A detailed script is used for setting up and clearing the stages. A listing of all volunteers assigned to a given stage is maintained at Net Control. All personnel are accounted for at the close of each stage.

Many of the areas requiring Course Marshals are quite remote. To prevent anyone trying to find their own way out of the stage to a main road, maps will be provided, or instructions given, on where to meet after the stage has closed. The Stage Captain will decide how the stage is to be cleared (i.e. start to finish or finish to start). Green Light will, in some cases, have the responsibility of leading volunteers out of the stage. **THEY MUST BE INFORMED OF THIS DUTY.** The preferred way to leave these areas is by caravan with a radio operator and a pre-established route. Everyone is then accounted for and is located at a common and known intersection or town. Weather is always a factor...**BE PREPARED!**

6.6 TRAFFIC SAFETY

The Clerk of the Course and the Chief of Communications establish the traffic control, marshal, medical, and communication plan for each stage, which is indicated on planning maps and in the organizer route book. Net Control oversees and logs the actual deployment for each stage. The deployment may be revised as necessary based on the observations of the course setup teams.

Stages are scheduled to be manned for traffic control a minimum of 1 hour before the first car is due. This gives non-rally people on the stage a chance to get out or to be informed of the event and a decision made regarding their presence on the stage.

There are three ways to control this traffic:

- Regular rally controls (checkpoints) at the start and finish of each special stage,

- Course marshals who block the entrance to the special stages from side roads within the stage where civilian vehicles could enter,
- Roads which are overgrown and/or unused are taped with banner 12 to 24 hours ahead of the first car due time. Personnel who place the control crews will check these tapes and investigate any road with tracks or broken tape before allowing competitors to start the stage.

6.6.1 Civilian Traffic Safety

Civilian vehicles and pedestrian traffic is kept off the stages (competition sections) of the rally for the period beginning when Car 000 passes until the Green Light Sweep vehicle has reached the finish control location. Civilian vehicle and pedestrian traffic is controlled in the following manner:

- A warning and information sign will be placed at the start, finish, major intersections, and designated trails (if any) within all special stages about 2 weeks before the event
- Start and Finish Controls block their respective access points
- Course marshals block the entrance to the special stages from side roads, designated trails, and residences within the stage where civilian traffic could enter
- Roads which are overgrown and/or unused are taped with orange or yellow banner 12 to 24 hours ahead of the first car due time; personnel who place the control crews will check these banners and investigate any road with tracks or broken banner before allowing competitors to start the stage.
- **If a vehicle attempts to enter at a Start or Finish Control or Course Marshal Location, they will be stopped and informed of the danger. Net Control will be notified if there may be problems.**

6.6.2 Authorized Access

After a stage has been set up (Car 000 has passed), it is closed to civilian traffic. NET CONTROL DECLARES A STAGE OPEN FOR COMPETITION AND CLOSED FOR NON-RALLY TRAFFIC.

Once a stage is manned and closed to civilian traffic, only Net Control can permit access by any vehicle, and only in the same direction as the competition. Net Control logs and broadcasts the passage of those vehicles, which must have an onboard radio operator and are typically limited to the following event personnel:

- CHAIRPERSON
- CHIEF OF EMERGENCY SERVICES
- CLERK OF THE COURSE
- ARA SERIES STEWARDS
- CHIEF OF CONTROLS
- COURSE OPENING VEHICLES (Car 000, Car 00, Car 0)
- COMPETITORS (during active competition)
- SWEEP VEHICLES
- GREEN LIGHT
- EMERGENCY RESPONSE TEAMS

If emergency vehicles must enter a stage during the competition, Control Marshals will immediately stop rally traffic at the Start Control to allow the emergency vehicle to proceed.

6.6.3 Emergency Vehicle Access

If emergency vehicles must enter a stage during the time competitors are running, Start Control can immediately stop rally traffic at the start to allow the emergency vehicle to proceed.

6.6.4 Course Opening

The competitors are preceded by Control crews and Course Marshals traveling to their assigned locations. Course opening vehicles will check to see that the rally personnel are in place and that all civilian traffic is off the stage road.

6.6.5 Course Closing

Following the last competitor, at least two sweep vehicles will enter the stage to aid any disabled rally cars and ensure that the course is clear before dismissing the marshals on the stage. If this is the last running of that stage, they will be followed by a Green Light vehicle. They may also lead the Course Marshals to the end of the stage, if required.

6.7 FIRE CONTROL

Emergency vehicles must carry a fire extinguisher. In addition, each competitor has an on-board fire extinguisher. If any fires should break out along the route of the rally, the event will be halted. NET CONTROL will notify the appropriate emergency agencies.

ALL FIRES MUST BE REPORTED IMMEDIATELY TO NET CONTROL

Local fire offices will be contacted prior to the event for their input on additional safety measures to be taken. Environmental conditions may change prior and during the event. Procedures will be changed to accommodate any fire danger change. A notice will be placed on the Official Notice Board if fire conditions change.

7 MEDICAL

7.1 MEDICAL PERSONNEL QUALIFICATIONS

All medical personnel working at the Rally should have emergency trauma experience and be a Medical First Responder, Emergency Medical Technician B, A or Paramedic, a Nurse, Physician's Assistant, Registered Nurse and in some cases a Doctor. The Chief of Emergency Services will evaluate other qualifications on a case-by-case basis.

7.2 EQUIPMENT

Each medical person has preferences for equipment. Rather than dictate what should or should not be carried, we prefer to give a broad outline and let each of you bring what you are most comfortable. Start Medical teams must have spinal motion restriction equipment and a first aid kit to include oral airways.

Recommendations are:

- Spinal motion restriction equipment (long/short boards, C-collars, straps)
- Basic airways (oral / nasal)
- Oxygen and delivery devices
- Dressings / Bandages
- Scissors
- Splints
- Stethoscope
- Blood pressure cuff
- Gloves & disinfectant
- Portable spotlight (with fresh batteries)
- Blankets
- Fire extinguisher

Medical and sweep vehicles should be equipped with fire extinguishing materials in addition to their medical aid kits and have radio contact with the event.

7.3 MEDICAL PERSONNEL IDENTIFICATION

All medical personnel working the event will be wearing locally-required medical attire.

7.4 MEDICAL (MED) TEAM

A Med Team is stationed at the Start of each special stage. A Med Team ideally consists of a Medical Person and a Radio Operator together in a vehicle with a driver. In the case of any medical incident on a stage, the stage will be halted, and this vehicle will be the first to respond to the incident. If a designated Radio Operator is not present in the vehicle used by the Medical Person, the Start Radio will accompany the Med Team until the situation is resolved.

A Med Person will be stationed at each spectator point. This Med Person will make use of the designated radio operator at the respective spectator point to communicate with Net Control.

8 INCIDENTS

A medical team with trauma or emergency medicine experience will be stationed at the Start of each special stage and/or at official spectator areas. They will be in a separate vehicle with a driver and, if available, a radio operator. In case of any accident on the stage, this vehicle will be the first response team.

8.1 WEATHER

Net Control and the Chief of Emergency Services will monitor the Weather Forecast using all available resources, to be aware of any potential threat from severe or unusual weather in the rally area. In the event of any severe weather watches or warnings, Net Control will provide a general announcement via the rally radio frequency.

8.2 LAW ENFORCEMENT AND INCIDENTS

All incidents involving accidents with property damage outside of the rally stages are to be handled by calling 911. Local law enforcement will handle the investigations and activation of emergency medical services.

For all incidents occurring on rally stages, law enforcement does not need to be called. These incidents are to be handled through the rally chain of command.

8.3 MED TEAM ACTIVATION

Only NET CONTROL (using information from the Chief of Emergency Services) can decide to send a medical team into a stage. NET CONTROL must be kept informed of the situation during the response.

Upon arrival at the scene, the med team will assess the situation and:

- Communicate the number of victims and the injury severity in plain language
 - Minor injuries, severe injuries, life threatening injuries, and K for fatal injuries
- Handle the problem and cancel further assistance –OR--
- Make known what additional help is needed such as:
 - Additional rally medical teams
 - Transport EMS unit(s)
 - Extrication
 - Fire

Both the Chief of Emergency Services and Net Control have the information necessary to contact additional assistance, if required.

- If a patient requires transport, a jurisdictional EMS ambulance will be used
- If transport by air is required the jurisdictional EMS crew will make that call.

Please say nothing to anyone except the Clerk of the Course, the Rally Chairperson, the Chief of Emergency Services, the Steward, or the ARA Series Manager. Refer all questions from press and civilians to the Rally Chairperson.

8.4 POSSIBLE TYPES OF EMERGENCIES

A rally is a race and people can receive serious injuries or incur medical issues. Emergencies may include trauma, medical and environmental. Be prepared. Anyone, competitors, service crews, volunteers, spectators and the general public, are potentially at risk.

Almost any injury that could occur in an automobile accident on the civilian roadways is possible in a rally. The roads used are usually unpaved, tight, and twisty, and are usually located in remote areas. Rally competitors compete against the clock for the shortest time to traverse the stage. The following is a guide to the types of injuries which are most likely to occur within the framework of the rally.

- Lacerations
- Burns, Thermal, Chemical
- Sprains / Fractures
- Carbon Monoxide Poisoning
- Head Injuries
- Heat Exhaustion / Heat Stroke
- Spinal Injuries
- Exposure / Frostbite
- Broken Ribs
- Penetrating Wounds
- Pelvic Fractures
- Crushing Injuries
- Internal Injuries
- Shock

8.5 COMPETITOR SAFETY EQUIPMENT

All competition vehicles are equipped with:

- A 10lb BC rated fire extinguisher. Some vehicles may have integral fire control systems installed
- Master Electrical Disconnect Switches
- A First Aid Kit
- Approved multi-point safety harness
- ARA approved roll cages.
 - The construction of these cages can, in itself, pose a serious risk to anyone who is not familiar with how they are built, and the materials used.
 - Cutting any portion of the cage may result in a release of tension in another part of the vehicle.
 - It is possible to cut a roll cage with a reciprocating saw. Have extra blades on hand.
 - Hydraulic shears may be used, but they may only compress the bars. Extreme caution is required in these situations.

Competitors are required to wear:

- Approved competition-type multi-point safety harnesses
- Approved helmets (either open face or full face)
- Approved head and neck restraint devices
- Approved suits of nonflammable materials such as NOMEX or DURETTE on the special stages (competition or racing sections) and on the testing and practice stages

Some difficulty in extrication may be encountered due to this safety equipment.

8.6 POST INCIDENT INSPECTION AND REPORT

An American Rally Association incident report must be filed whenever a situation results in injury or appreciable vehicle or property damage. A state accident report may also be required. Any incident involving a spectator and/or civilian may also be documented on an incident report. Minor incidents do not require an incident report. The Chairman is the Public Information Officer for the event and will work with the ARA to develop all messaging to the public.

If a competition vehicle is damaged, the Chief Scrutineer should inspect the vehicle before it leaves the event community and submit a brief written report; a note will also be made in the log book for the vehicle.

An accident causing injury is the responsibility of law enforcement officers or officials, and they must be notified. Please give these officers all available assistance in developing their report.

- Each accident must have a complete report that includes statements from the first and second competitors to arrive at the scene, any volunteers who either witnessed or were involved, emergency services personnel if they responded, and any other relevant witnesses.
- In addition, the accident/incident scene should be diagrammed as well as possible, with distances included and landmarks identified. Accident photographs should be taken. The Chief Scrutineer should inspect the vehicle before it leaves the event community and submit a brief written report.
- An accident causing injury is a law enforcement function. They will be called. Please give these officers all available assistance in developing their report. Medical teams must complete the medical incident form for those receiving medical assistance. If assistance is refused, the refusal portion of the form must be completed. The medical incident forms will be personally given to the Chief of Emergency Services during the rally.

9 COURSE OPENING AND CLOSING CREWS

9.1 COURSE OPENING

9.1.1 Car 000

Car 000 is primarily responsible for verifying the placement of all volunteers and control locations, checking clocks, assuring all bannerings is correct and unbroken, clearing the course of any civilians, and assuring stage integrity has been achieved. They may also be timed into the controls as if a normal competitor to check operations.

9.1.2 Car 00

Car 00 is charged with all of the above, paying particular attention to spectator area containment and spectators not at approved viewing locations. They are also responsible for verifying route instructions for accuracy and checking control clocks. They may also be timed into the controls as if a normal competitor to check operations.

9.1.3 Car 0

Car 0 duplicates Car 00's duties but typically runs at speeds higher than that of the previous course opening vehicles. These are the last sets of eyes on the course prior to competition; they must review the road, start and finish controls, all marshal locations and spectator areas for event readiness. Any variance must be corrected before the stage is allowed to start.

Their primary duty is to notify NET CONTROL of anything that is not right in the stage and to complete this by 5-10 minutes before the first competition car is expected to leave the stage start. NET CONTROL will notify the proper official and put them in contact with CAR 0 to resolve the situation.

Car 0 will also report upon entering and leaving a stage. When leaving the stage, the report will also indicate whether the stage is ready for the competitors or not. **ONLY NET CONTROL can declare a stage open for competition.** The driver and co-driver of CAR 0 may also be timed into the controls as if a normal competitor to check operations.

9.2 COURSE CLOSING

9.2.1 SAFETY SWEEP

The medical sweep team will have medical equipment and a radio. They will follow the last rally car at a safe speed and will be in front of the sweep team. This team will not continue past a rally car that is off, except to allow the rally vehicle to get back onto the course, until it is determined that the rally car will no longer be able to compete in the race. The rally car's crew can tell the medical sweep team that they are out of the competition and surrender their time card, after which the medical sweep team will continue behind the rally again while sweep takes care of the rally vehicle. If the rally crew wants to attempt to continue, then the medical sweep team will stay behind them until there is a decision that the rally car is time barred and out of the race. The medical sweep team will then take the rally crew's time card and continue behind the rally cars again.

The medical sweep team will not replace the stage medical team, but will be an augmentation of the start medical, or mid-point medical, teams. If there is an incident on the stage and medical assistance is required then the stage medical team will be sent regardless if there is a medical sweep team in front of them. The primary function of the medical sweep team is to be able to continue directly behind the

rally, including through the transits. Variances of this function may be made occasionally with permission from net Control and the Chief of Emergency Services.

9.3 SWEEP CREWS

There will be sweep vehicles with a radio operator in at least one vehicle. CB radios may be used between vehicles, but communications into NET CONTROL will be via **800 MHZ** radio or as designated by Chief of Communications. Information may also be relayed via the Start and Finish Control radio operators. The responsibility for relaying reports of disabled vehicles rests with the sweep drivers upon their arrival at a finish control, if they cannot reach NET CONTROL.

9.4 GREEN LIGHT

There will be one vehicle that will follow the sweep vehicles through the stage with a green light on it. This vehicle will be responsible for opening the road to the public, releasing the marshal's from their positions, and also making sure that no volunteers are left on the course after the stage is completed. There might be occasions where the green light vehicle may pass the sweep vehicles, i.e.; heavy sweep will be tied up for an extended period of time to extricate or remove a vehicle, but this will be coordinated through net control.

10 START CONTROL PROCEDURES

A Start consists of an Arrival Time Control (ATC) and a Stage Start (SS). Cars arrive (via open public roads) at the ATC to ensure they are on-time and start racing at the SS when counted down.

10.1 START – PRE- STAGE OPERATION

When you arrive at your stage, get both the start and finish controls set up as quickly as possible. This ensures that the road is closed to civilian traffic at least one hour prior to the first competitor arriving.

General tasks required are:

- Set up signs
- Check radio communication with NET CONTROL
- Have ready all logs, timing equipment, sequence numbers
- Notify NET CONTROL when medical team arrives
- Have medical team check radio operation with NET CONTROL
- YOUR STAGE IS CLOSED TO ALL BUT AUTHORIZED RALLY OFFICIALS WHEN YOU ARE SET UP AND COMMUNICATIONS ARE ESTABLISHED AND CAR 000 PASSES YOUR LOCATION.

The following vehicles may travel through a stage after the road has been closed but before the competitors:

- CHAIRPERSON
- CLERK OF THE COURSE
- COURSE OPENING (CAR 000, 00 and 0)
- CHIEF OF CONTROLS
- CHIEF OF EMERGENCY SERVICES
- ARA STEWARD

Notification to NET CONTROL will be made when these vehicles enter and leave the stage.

Car 0 must finish the stage within 5-10 minutes before the first Competitor Car's Out time

NO COMPETITORS CAN BE STARTED UNTIL CLEARED BY NET CONTROL.

Arrange for the Course Marshals and Finish Control personnel to meet at one location and account for everyone after the stage is closed. No one should be left to get out on their own. Either they (and you) will follow Green Light out of the stage (notify the sweep drivers this will happen) or the Finish Control captain will run the stage in reverse order picking up the marshals as he goes. If the weather is bad, be particularly careful that you account for everyone.

10.2 START - STAGE COMPETITION - NORMAL OPERATIONS

1. **DO NOT start ANY competition cars until NET CONTROL gives you permission to do so**
2. **YOU MUST NOTIFY NET CONTROL WHEN THE FIRST RALLY CAR STARTS, PREFERABLY AS THE CAR IS STARTING.** NET CONTROL will then contact the finish and any other radio points on the stage to ensure that everyone is aware of cars on the stage.
3. **Keep a running log of arrival and start times and car numbers of the cars started.**
 - a. Additionally, the radio operator has a checklist of the items of information he/she needs to convey to others in the rally
4. **Remember to issue SEQUENCE NUMBERS!**

- a. *Sequence numbers placed on the scorecard at the START LINE are checked at the Finish Control so that all cars may be accounted for!*
5. Contact NET CONTROL if you have any problems. Specific stages will have different requirements for pickup/layout/shutdown due to the condition of the roads, transits, etc.
6. When the sweep vehicles arrive, they may use the Start radio to check in with NET CONTROL. **You must remain in position, until Green Light has cleared the finish.**
7. If possible, try to account for all vehicles (i.e. equal car counts at start and finish) before sweep arrives. Notify Sweep of the number of cars started, number of cars finished, if any cars are still on the stage, and if any are confirmed off the road. If Sweep is to lead marshals to the Finish, inform Sweep when they arrive at the Start.
8. Confirm with Sweep that they will make contact with NET CONTROL via radio when they reach the Finish Control so the stage may be officially closed and volunteers may disband.

10.3 START - STAGE COMPETITION -EMERGENCY PROCEDURES

The following Procedures are to be followed when and if you are notified of an incident within your stage:

1. Notification of an incident will usually come from the radio operator.
2. **IMMEDIATELY** halt stage operation - **DO NOT START ANY MORE CARS!**
3. Inform your medical team of the incident and all information you have.
4. Wait for Net Control's order to send medical team; if the medical team does not have a radio, the Start Radio will travel down to the scene with or behind the medical team.
5. The medical crew with RADIO CONTACT will notify any stalled competitors of the emergency ahead. These vehicles WILL NOT race to the finish even if they are able to continue.
6. Instruct the timekeeper to make a list of the numbers of the cars started into the stage, the number (total) of cars started, and the number of the LAST CAR started as soon as possible.
7. Emergency vehicles will be started to the scene of the incident and will have to travel through the stage. Please keep the road open!
8. Continue to clock cars in at the start but instruct the starter to wait for authorization before starting any cars down the stage. Do NOT create a backup of cars -- have them wait off to the side of the road, unless they have to turn around and transit around to the next stage.
9. The medical team will be in contact with NET CONTROL as they proceed down the stage. **Do Not Interrupt.** This communication is vital in passing along any additional information or requesting additional resources based on information given. If you need to talk with the NET CONTROL, switch to the alternate frequency for your stage. You might be out of contact with the rally officials even on this frequency.
10. NET CONTROL, or the Clerk of the Course, will notify the Stage Captain of the decision regarding this stage and what to do with the remaining competitors. Options are to transit through the stage when safe, to transit a certain distance and then leave on a side road, or to bypass the stage completely and go to the next Start or Service.

PLEASE SAY NOTHING TO ANYONE EXCEPT RALLY OFFICIALS REGARDING AN INCIDENT. REFER ALL QUESTIONS FROM PRESS AND CIVILIANS TO THE CHAIRPERSON.

10.4 START - STAGE CANCELLATION

Stages can be canceled due to many reasons, such as:

- a. Spectators out of control
- b. Spectators in any unauthorized areas of the rally.
- c. Accident
- d. Adverse Weather
- e. Lack of Radio contact with Net Control

If the stage is canceled, the competitors may transit (at a slower speed) through the stage, rather than be rerouted, according to instructions from Net Control.

10.5 START – POST-STAGE OPERATION

- Notify NET CONTROL of last 3 cars out, total car count, and Sweep leaving Start on course
- Listen to radio for Finish Control's final car count
- When NET CONTROL states that everyone's accounted for AND final sweep has cleared the finish, confirm with NET CONTROL that you are finished and may leave, typically following the stage route to pick up your volunteers

11 MID-POINT PROCEDURES – WHEN APPLICABLE

11.1 EMERGENCY PROCEDURES

The following Procedures are to be followed when and if you are notified of an incident within your stage that requires mobilization of the **midstage medical team**, as applicable:

1. NET CONTROL is advised of an unknown or injury incident within a stage.
2. NET CONTROL requests a car count from the start and mid-stage radio operators.
3. If the incident is deemed to be between the mid-point and finish of the stage, the mid-stage medical team is mobilized.
4. **IMMEDIATELY** halt stage operation at the mid-stage point by turning on any emergency lights and holding / placing the Red Cross sign in a visible place to on-coming competitors.
5. Wait for the first competitor to arrive and display Red Cross. Advise competitor to safely display triangles.
6. Emergency vehicles will be started to the scene of the incident and will have to travel through the stage. Please keep the road open the width of a large emergency vehicle!
7. Notify NET CONTROL when medical team proceeds down the stage (direction of rally traffic) to the incident. If the medical team is not comprised of a radio operator, then one from the start point **MUST** travel to the incident with the medical team.
8. The medical team will advise NET CONTROL of the assistance needed upon surveying the scene.
9. NET CONTROL will notify the Stage Captain of the decision regarding his stage and what to do with the remaining competitors. Potential options are:
 - a. transit through the stage when safe
 - b. transit a certain distance and then leave on a side road
 - c. bypass the stage completely and go to the next Start or Service

PLEASE SAY NOTHING TO ANYONE EXCEPT RALLY OFFICIALS REGARDING AN INCIDENT. REFER ALL QUESTIONS FROM PRESS AND CIVILIANS TO THE CHAIRPERSON.

12 COURSE MARSHAL PROCEDURES

12.1 MARSHAL – PRE- STAGE OPERATION

Make sure YOU and your VEHICLE are well off the stage road, and away from the route competitors would take if they miss a turn. Position your vehicle to block civilian traffic; but leave room for that rally car that misses the turn.

If you have a radio, please make this fact known to the Stage Captain at the pickup point, and check that it works. If you are an amateur radio operator, check in with NET CONTROL.

YOU ARE “OPEN” WHEN YOU ARE PLACED IN POSITION. DO NOT MOVE FROM YOUR LOCATION. STAY THERE UNTIL THE GREEN LIGHT FINAL SWEEP VEHICLE TELLS YOU TO LEAVE. ONLY LEAVE FOLLOWING THE PRE-DETERMINED ROUTE AS ASSIGNED BY YOUR STAGE CAPTAIN.

12.2 MARSHAL - STAGE COMPETITION - NORMAL OPERATIONS

The primary responsibilities of a Course Marshal are to deter civilian vehicles from entering an active rally stage, AND not permitting people to view from UNSAFE AREAS. Use tact, COMMON SENSE, and patience. The longer you can delay a person, the more likely that a rally car, at speed, will come along to dramatically emphasize the points you are trying to make.

12.3 MARSHAL - STAGE COMPETITION - EMERGENCY PROCEDURES

Failure to stop someone from entering the rally course could result in a dangerous situation for the competitors.

- If the vehicle enters the stage and proceeds ***against* rally traffic**, there is nothing further you can do unless you have a radio to warn the Start, Finish, Mid-point radio (if present), or NET CONTROL.
- If a vehicle enters the course and proceeds ***with* the flow of rally traffic**, you can warn the competitors by showing a Red Cross or waving a piece of clothing (from a safe position).

In all cases of any civilian vehicles entering the stage road, make every attempt to get the license number and a description of the vehicle (make, type, etc.). This applies to any rowdy or otherwise uncooperative persons as well.

Please say nothing to anyone except the Clerk of the Course, the Rally Chairperson, the Chief of Emergency Services, the Steward, or the ARA Series Manager. Refer all questions from press and civilians to the Rally Chairperson.

12.4 MARSHAL – POST-STAGE OPERATION

Only leave your position, after Green Light has passed, following the directions and route assigned by your Stage Captain.

13 SPECTATOR SAFETY PROCEDURES

13.1 SPECTATOR SAFETY LOCATIONS

Rally Colorado are pleased to have spectator-viewing areas. These areas will be made public and managed by a designated Spectator Safety Steward in conjunction with rally officials. **These Spectator areas are the only areas where people will be allowed to view the rally. If there are any spectators found outside the official spectator areas, the stage could be shut down, and all rally traffic will be stopped by the use of a Red Cross.**

Spectator areas will have the following:

- The viewing areas must be well marked with special banner tape; YELLOW banner will signify it is OK to stand behind; RED banner indicates NO ONE MAY STAND HERE
- Marshals will be used to control the public and instruct them in good viewing locations for their safety; and
- A radio operator must be positioned at this location along with medical personnel.

It is the intention of the organizers that every intersection and trail will have some form of notification regarding the rally. This may be by banner or a marshal. If, at any time, an area is having trouble controlling the number of people, or the situation is generally getting out of hand, the Stage Captain or marshal will notify NET CONTROL by any means available. The rally traffic WILL BE STOPPED if safety cannot be guaranteed.

Stay out of the danger zones: The danger zone is along the outside of a curve which is where a vehicle would be moved by centrifugal force during a crash or loss of control.

Safety must come first if you are watching a Performance Rally.

Observe the following rules for everyone's benefit:

- **Obey the rally officials' instructions.**
Not following their instructions could endanger lives or cause a racing stage to be cancelled.
- **If there is an accident, stay out of the way.**
Also, remember there may be more rally cars coming on the road.
- **DO NOT cross the rally road during the running of the stage!**

- **Stay out of the danger zones indicated above.**

- **Listen and watch for rally cars.**

Do not turn your back to them.

- **DO NOT block access roads!**

Emergency and official rally vehicles NEED clear roads.

14 FINISH CONTROL PROCEDURES

A Finish consists of a Flying Finish (FF), and a Finish Control (FTC). Cars are timed at the FF, and their scores are recorded at the FTC. Competitors are at speed when they cross the FF, but then stop at the FTC.

14.1 FINISH – PRE-STAGE OPERATIONS

When you arrive at your stage, get the controls set up as quickly as possible. This ensures that the road is closed to civilian traffic at least one hour prior to the first competitor arriving.

Set up signs, check radio communication with NET CONTROL, and decide upon notification procedure between FINISH LINE (flying finish) and FINISH CONTROL.

Flying Finish volunteers will be sheltered by a natural barrier or stand at a safe distance from finishing rally cars.

Have ready all logs (to include sequence numbers and log sheet) and timing equipment

CRITICAL NOTE: If any vehicle proceeds *backwards* (against rally direction) on a stage, tell NET CONTROL immediately if such occurs.

The following vehicles may travel through a stage (in rally direction) after the road has been closed but before Car 00. After 00 has started on the course, these vehicles may only travel through the stage with the permission of Net Control:

- Course Opening Cars (000, 0, 0)
- CLERK of the COURSE
- CHAIRPERSON
- CHIEF OF CONTROLS
- CHIEF OF EMERGENCY SERVICES
- ARA STEWARDS

Notification to NET CONTROL must be made when these vehicles enter and leave the stage.

14.2 FINISH - STAGE COMPETITION - NORMAL OPERATIONS

- *Keep a running log of arrival times, car #'s & sequence #'s of the cars finishing.* The radio operator has a checklist of the items he/she needs to convey to others in the rally.
- Contact NET CONTROL if you have any Problems. Specific stages will have different requirements for pickup/layout/shutdown due to the condition of the roads, transits, etc.
- Listen for how many cars started the stage. When all cars are accounted for at the finish, let NET CONTROL know how many have finished.
- Tell NET CONTROL when the final sweep vehicle arrives.
 - **You must remain in position, until Green Light has cleared the finish.**
 - Then, ask NET CONTROL if you are finished with your assignment.
- **Remember to check SEQUENCE NUMBERS!**
 - Sequence numbers are placed on the competitor's scorebook at the Start Control and are checked at the FTC to account for all cars.
 - **If a sequence number is MISSING, HOLD THE COMPETITOR and ask if they passed any rally car and the details (mileage, car number, OK?).**

- Ask if they passed a car or saw the car on the side of the road
- *Continue to get further details from subsequent competitors until you have complete information.*
- *Pass any information to your radio operator and your control captain.*

14.3 FINISH - STAGE COMPETITION – EMERGENCY PROCEDURES

The following Procedures apply **ONLY** if you receive a report of an accident on your stage:

1. HOLD the competitor reporting the accident (or source of the information) until all information is clear and reported to NET CONTROL:
 - a. Mileage from the start and the instruction number – if known
 - b. Car number – if known
 - c. **YES or NO ONLY** if there are known or suspected injuries, entrapment, or fire
 - d. Number of cars that finished the stage
2. Give the information to the radio operator for relay to NET CONTROL, and advise the **START TO HOLD THE CARS AT THE START** while a further determination of the situation is made.
3. Immediately instruct the timer to get a car count & check sequence number for NET CONTROL and update them as cars continue to finish the stage.
4. Cars may continue to enter the finish. They can provide additional information on the incident. Stay calm and refer all comments to the Finish Captain.
5. Relay all additional information to NET CONTROL. The radio network will already be in emergency operation with your traffic taking top priority. If you are asked for something you don't have, say so and then attempt to get the required information.
6. Wait for directions from the NET CONTROL, Chairperson or Chief of Emergency Services.
7. Depending on the nature of the incident, your stage may not be restarted and competitors will either bypass the stage or transit through to your location and continue on the route. Rally officials will make this decision.
8. If the competitors transit to the finish, take down the control signs and record the numbers of the cars as they pass through the former control zone in the log.

PLEASE SAY NOTHING TO ANYONE EXCEPT RALLY OFFICIALS REGARDING AN INCIDENT. REFER ALL QUESTIONS FROM PRESS AND CIVILIANS TO THE CHAIRPERSON.

14.4 FINISH - POST-STAGE OPERATION

A normal closing of a stage will require the sweep vehicles to reach the finish before dismissing volunteers. Sweep may use the Finish Radio to contact NET CONTROL and notify the start that the stage is clear, the numbers of stranded cars on the stage, their location, and service crew wishes.

Pre-arrange with the Stage Captain how the Course Marshals and Finish Control crews are to be collected.

15 SERVICE AREA OPERATIONS

The Service Area is where competition vehicles are serviced by their crews to make repairs, change tires, and other functions. The service area is under the control of the Chief of Service Areas. The Chief will be in a clearly marked vehicle, and will have clearly visible credentials.

There is no Med or Fire stationed at the Service area. In the event of an emergency the 911 Service is to be activated.

Service crews deserve correct and timely information on their cars. We can prevent a competitor from prolonged exposure if the service crew is notified quickly. In addition, if a crew is going one place and the car another, this needs to be coordinated. Service crews often and depend on information relayed from NET and the individual controls.

A dedicated radio operator will help teams by sending runners to the service crews of the stricken teams. The operator will keep track of the cars that are officially out of the event as given to them by NET CONTROL. This information will ONLY BE GIVEN TO THE CREW OF THAT VEHICLE. Call NET CONTROL if asked by the crew of a certain car and that vehicle is overdue.

The drivers may want the service crew to assist them in removing the vehicle from the woods. If you are not sure of the EXACT MESSAGE and the EXACT WORDING, contact NET CONTROL and treat this as a piece of formal traffic.

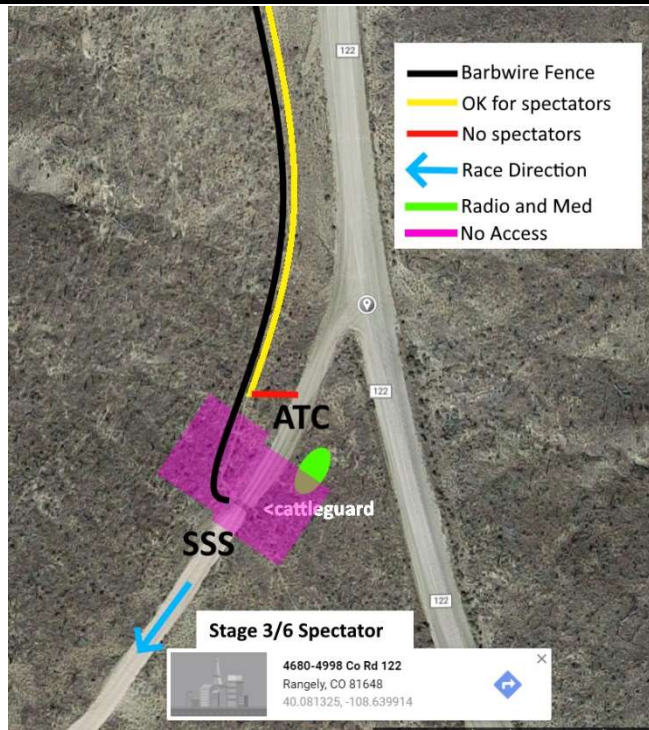

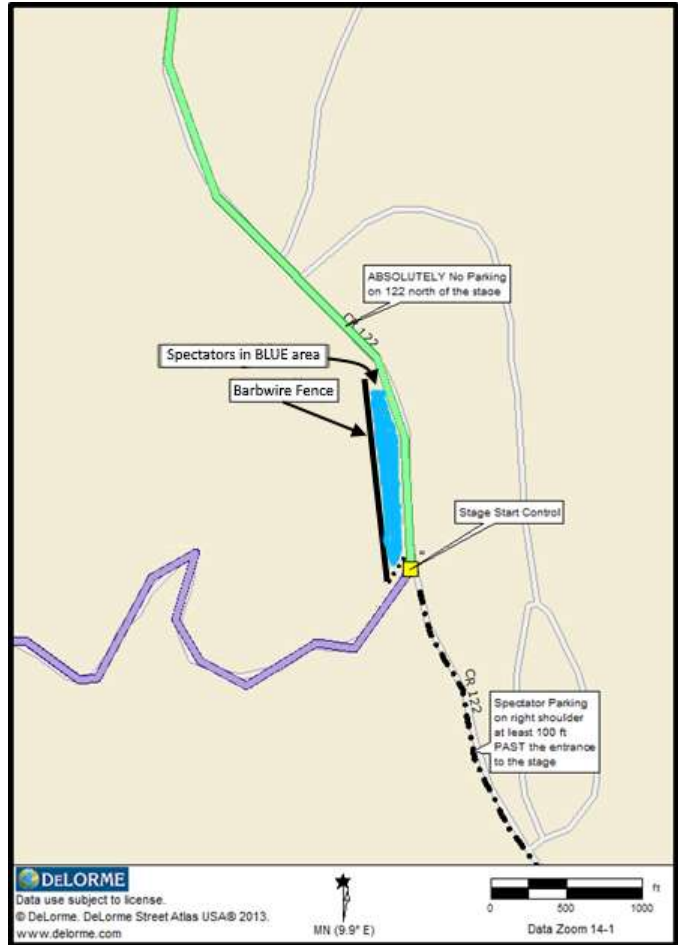

APPENDIX A – OVERVIEW MAP

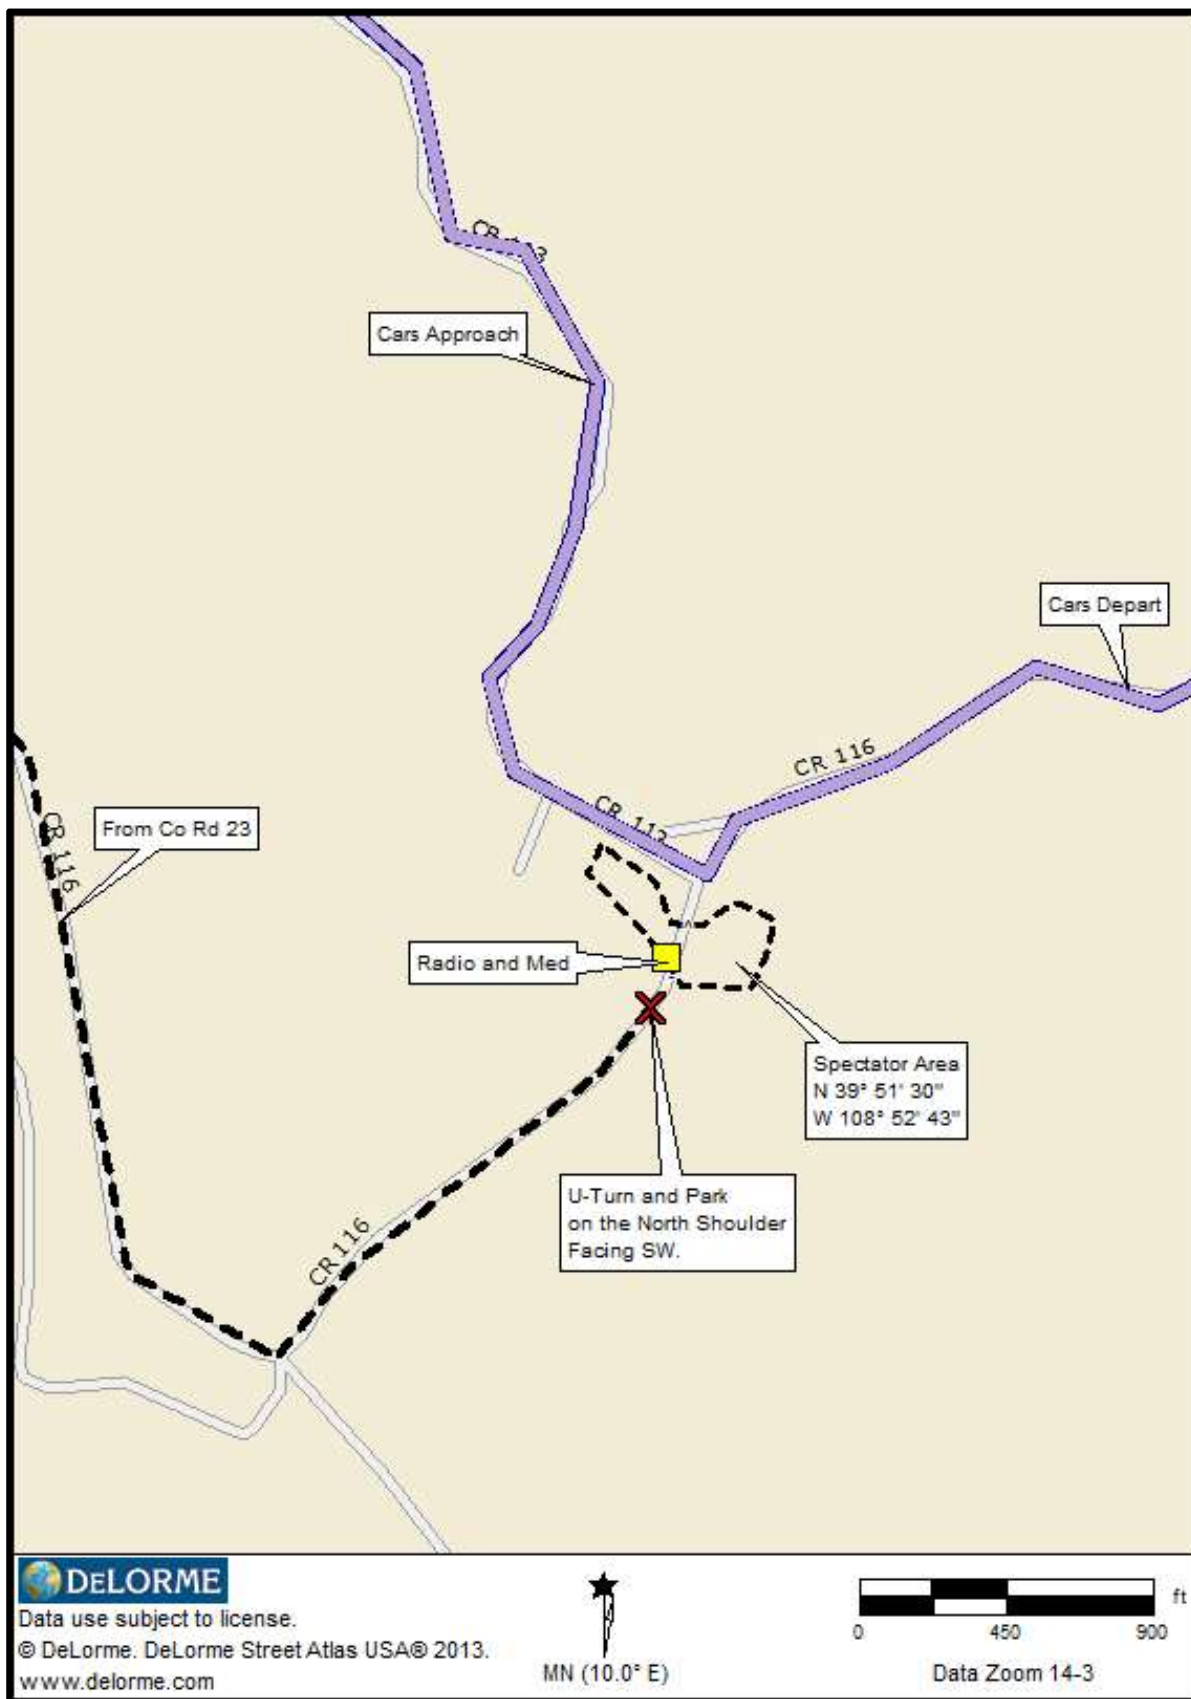

APPENDIX B – ROAD CLOSURE SCHEDULE

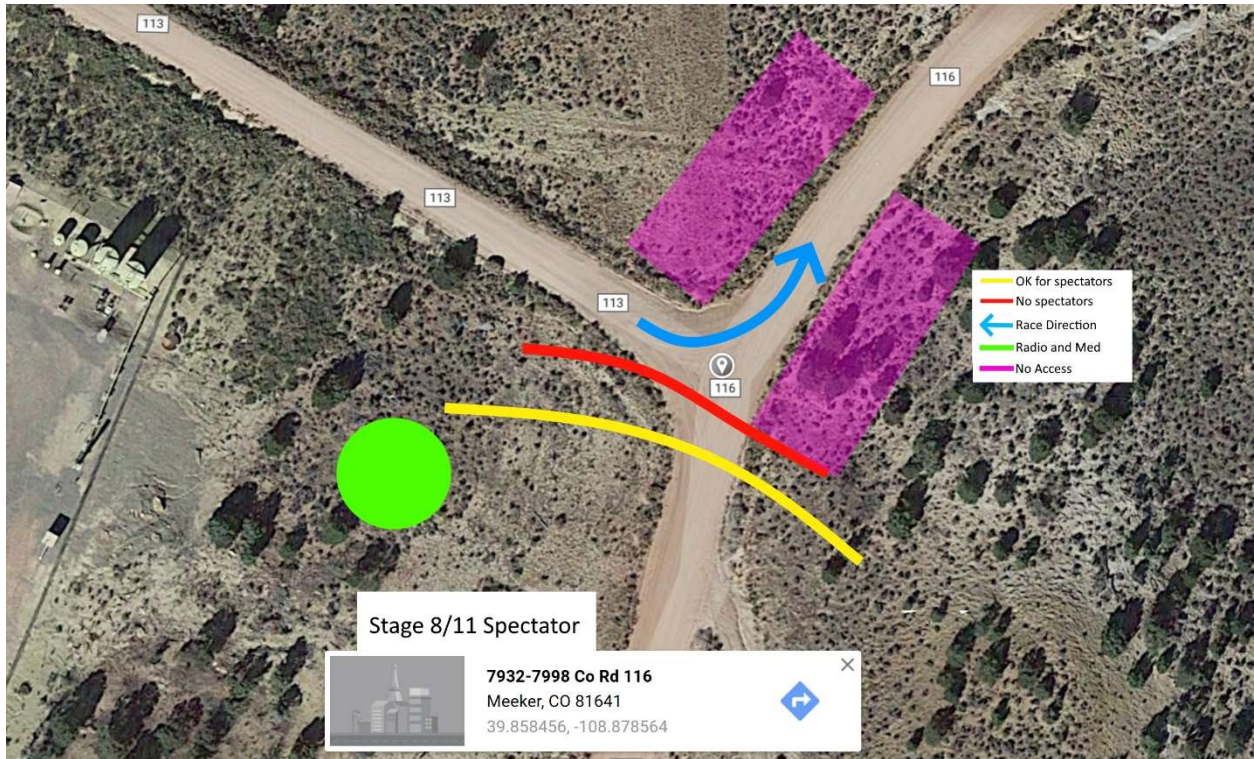

Name and Section of Road		Road Closed <i>Access Restricted</i>	Cars Competing <i>1st Running</i>	Cars Competing <i>2nd Running</i>
WEDNESDAY				
County 96	County 65 to 3.0 miles west of County 65	8:00 AM - 3:30 PM		
THURSDAY				
County 104	Colorado 139 to County 23	3:00 PM - 6:30 PM		
FRIDAY				
County 96	County 1 to County 65	9:00 AM - 5:00 PM	11:00 AM - 1:00 PM	2:30 PM - 4:30 PM
County 73	County 65 to 1.0 miles north of Colorado 64 (the ranch access stays open)	9:00 AM - 5:30 PM	11:30 AM - 1:30 PM	3:00 PM - 5:00 PM
County 131	County 122 to 1.0 miles south of Colorado 64	9:45 AM - 7:15 PM	12:00 PM - 2:30 PM	3:30 PM - 6:30 PM
SATURDAY				
County 100	Colorado 139 to County 23	8:30 AM - 4:30 PM	11:00 AM - 12:45 PM	2:30 PM - 4:00 PM
County 113	County 23 to County 116	9:00 AM - 5:30 PM	11:15 AM - 1:30 PM	2:45 PM - 5:00 PM
County 116	County 113 to 1.0 miles west of the Dragon Trail plant			
County 138	Colorado 139 to Colorado 139	9:00 AM - 6:45 PM	12:00 PM - 2:45 PM	3:30 PM - 6:15 PM

APPENDIX C – STAGE 3/6 SPECTATOR MAP

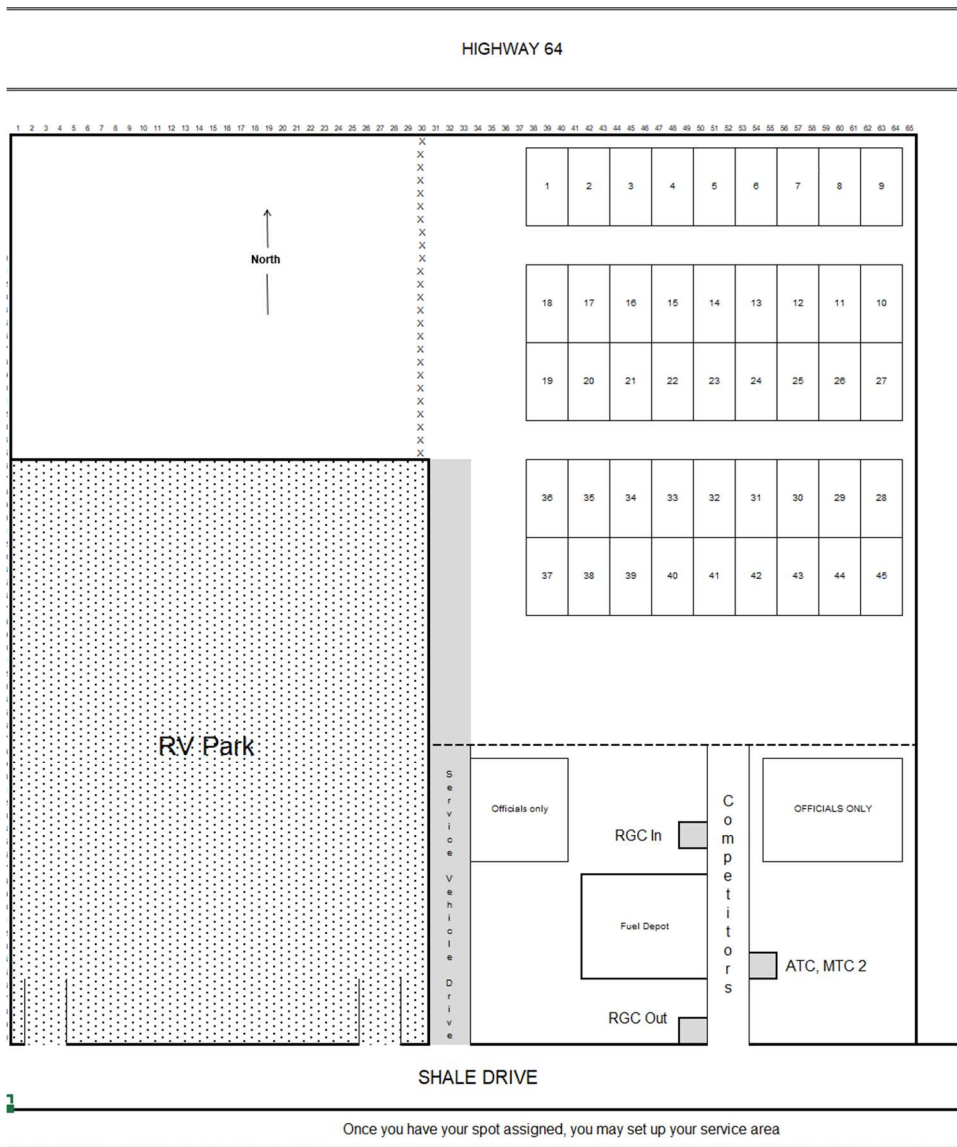

APPENDIX D – STAGE 8/11 SPECTATOR MAP

APPENDIX E – SERVICE AREA MAP

16 MODIFICATION LOG

Date Modified	Version	Modified By	Notes
05/06/2019	V0.0	Rob Bohn	Initial Version – major reorganization including changes seen in SOFR documents
05/08/2019	V0.1	Rob Bohn	Filled in some email addresses
05/22/2019	V0.2	Rob Bohn	Filled in further contact info
5/27/2019	V0.3	Rob Bohn	Additional contact info; remove blank page areas; improve footer
06/09/2019	V0.4	Rob Bohn	Change Chief of Emergency Services, change Spectator map
06/10/2019	V0.5	Rob Bohn	Additional Email addresses
06/11/2019	V0.6	Rob Bohn	Fill in Chief of Controls
7/5/2019	V0.7	Rob Bohn	Very minor changes from JB/Lyn notes, new spectator maps.
